

# Moyo

## Fast and Accurate Fetal Heart Rate Monitoring

This compact device easily monitors fetal heart rate during labor, helping health workers make informed and timely decisions for better care. It provides quick and accurate fetal heart rate information and can be used both continuously and intermittently.

The sensor can be strapped on to the mother's abdomen. Lightweight and portable, Moyo allows the mother to move around freely.

## Fast and Accurate Fetal Heart Rate Monitoring

### Timely and accurate monitoring

A 9-crystal sensor accurately detects the fetal heart rate within seconds as well as differentiate the maternal from the fetal heart rate.

### Better response to abnormalities during labor

Early detection of abnormal FHR guides decision making and helps health workers to act quickly. When used continuously, an audio-visual alarm is activated if an abnormal FHR is detected, and a 30 min histogram is provided.

### Confident health workers and happy mothers

Moyo is lightweight and portable — it can monitor continuously, even while the mother is moving around. It eases the workload for health workers without interrupting existing routines.

Normal fetal heart rate

Abnormal fetal heart rate

Prolonged Abnormal fetal heart rate

30- minute histogram

## Features

- Both intermittent and continuous monitoring
- 9-crystal sensor for better accuracy
- Differentiates the maternal and the fetal heart rate
- 30-minute histogram display of the FHR
- Audio-visual alarm if abnormal FHR is detected
- Lightweight and portable, can monitor continuously, even while the mother is moving around
- Internal rechargeable battery
