

## Emergency Care Learning Lab

# Basic emergency care

An extensive kit for training in basic emergency care for adults and children, including WHO's Basic Emergency Care and Community First Aid Response Programs.

# Emergency Care Learning Lab

An extensive solution for basic emergency care training

## Portable

To ensure easy transportation to training courses, all training models are nested inside a lightweight backpack weighing only 9 kilos.

## Affordable

The kit is offered on a not-for-profit basis to low-resource settings. It has been designed for maximum affordability without compromising quality.

## Durable

Used for hands-on skills training, simulations, and practical demonstrations, the kit components are designed to withstand rigorous use of hundreds of training cycles.

## Enables low-dose, high-frequency trainings

The combination of a comprehensive kit covering all skills, the low price point and high durability enables a paradigm shift: The training kits can now be distributed in large numbers and be left at the individual hospitals for important low-dose, high-frequency refresher trainings.

### Kit contents:

1. Head section model
2. Little Anne for emergency care
3. LittleBaby QCPR
4. Needle decompression trainer
5. Deep wound
6. IV pads x 2
7. Foam rolls x 2
8. Wounds x 10
