

MamaNatalie

## Postpartum complications simulator

MamaNatalie helps build confidence and competency of health workers and teams in the prevention and management of postpartum hemorrhage.

This wearable birthing simulator is designed specifically for the third stage of labor by simulating realistic bleeding.

# MamaNatalie

## Postpartum complications simulator

### Realistic bleeding simulations

MamaNatalie is ideal for training for active management of the third stage of labor, and prevention, identification, and management of postpartum hemorrhage. It can realistically bleed up to one liter of blood.

### Address the #1 cause of maternal deaths

Developed to train healthcare providers in prevention and management of postpartum hemorrhage - including manual removal of placenta, uterine massage and bimanual compression of the uterus.

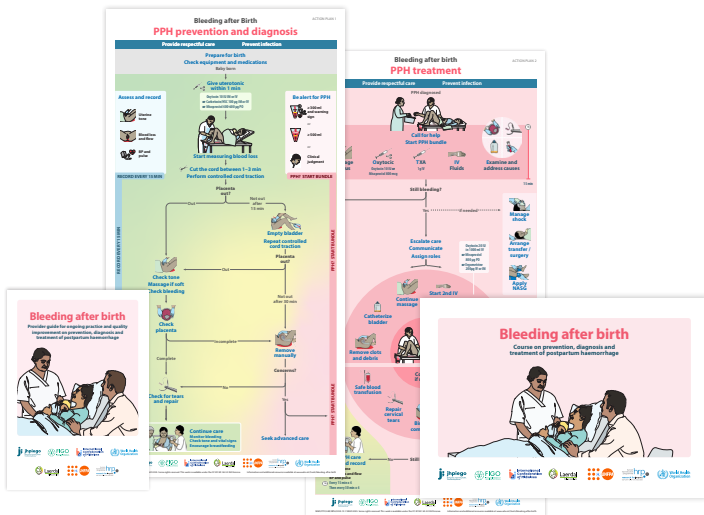

### Ideal for in-situ team training

Can be worn to facilitate realistic birth and resuscitation simulation scenarios. It can be used for in-situ team training and practicing respectful maternal care. MamaNatalie includes the newborn simulator NeoNatalie, to be used with newborn resuscitation training programs like Helping Babies Breathe.

### Enhancing teaching effectiveness

MamaNatalie is designed to support teaching of the Bleeding After Birth course that now incorporates the latest WHO recommendations on prevention, identification, and management of postpartum hemorrhage.

## Simulation scenarios

- Fetal heart rate sounds
- Urinary catheterization
- Uterine massage
- Normal birth
- Delivery of placenta
- Uterine compression
- Cord prolapse
- Retained placenta
- Postpartum hemorrhage
