helping save lives

LIFT Product Suite

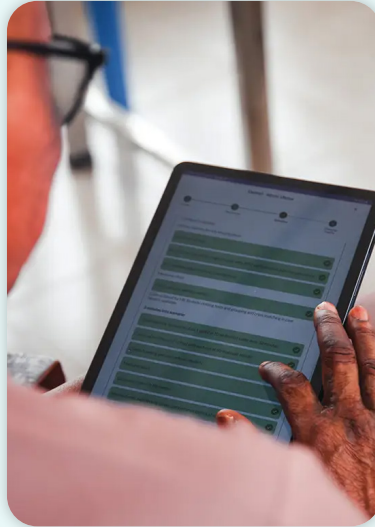

Learning Improvement Facilitation Tools

A suite of digital tools designed to enhance healthcare training, improve skills assessment, and provide real-time insights for better follow-up and decision-making.

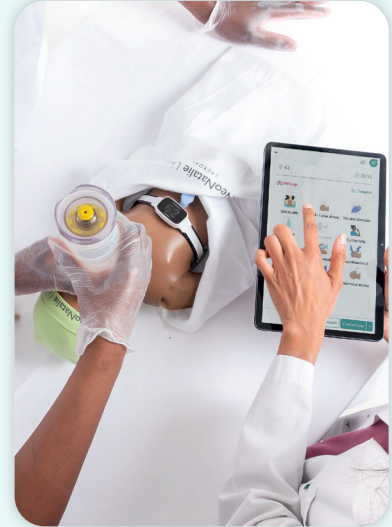

LIFT Assessments

A tool for conducting and facilitating knowledge and skills assessments, especially in low-resource settings.

LIFT Scenarios

An app that guides new and experienced trainers to confidently lead high-quality, effective simulation-based training.

NeoNatalie Live

A smart manikin and app for newborn resuscitation training, which supports self-directed simulation training and skills development.

The **LIFT Portal** is used to manage users and data across LIFT Assessments, LIFT Scenarios, and NeoNatalie Live.

Low Dose High Frequency Reporting

Monitor training compliance, identify underperforming sites, and ensure consistent skill development across the facilities. Weekly reports provide insights into training activity trends.
